

ABSTRACT OF THE DISCLOSURE

A grommet for holding a wire harness includes a plurality of wires on which an adhesive tape is wound. The wire harness has a water-stop portion.

5 A water-stop agent is filled in interstices between the plurality of wires at the water-stop portion. The grommet includes a first division member and a second division member. The first division member has a convex portion formed on an outer face thereof. The second division member has a concave

10 portion for receiving the water-stop portion. The concave portion has a shape corresponding to a cross-sectional shape of the wire harness. An inner face of the first division member is pressed against the water-stop portion of the wire harness when the convex portion of the first division member is pressed toward the second division member.
